The invention relates to full length GENSET human nucleic acids encoding potentially secreted proteins. The nucleic acids and the polypeptides they encode may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate GENSET gene expression. For example, they be used to treat disorders associated with decreased GENSET gene expression by rectifying mutations or deletions in a patient's genome that affect the activity of GENSET or by supplementing the patients own production of GENSET polypeptides. Conversely, antisense expression by binding with the cells' own genes and preventing their expression. The sense and antisense nucleic acids may also be used as DNA expression. The sense and antisense nucleic acids may also be used as DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human; secreted protein; gene therapy; vaccine; treatment; diagnosis; GENSET.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Full length GENSET human nucleic acids encoding potentially secreted proteins, useful in gene therapy and vaccination against a variety of diseases, and for diagnosis of those diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Bougueleret L, Jobert S;

                                                                                                                                                                                                                   probes in disgnostic assays to detect and quantitate the presence of shiltar nucleic acid sequences in samples, and hence to determine which patients may be in need of restorative therapy. The GENSET polypeptides may be used as antigens in the production of antibodies and in assays to identify modulators (agonists and antagonists) of GENSET polypeptide expression and activity. The present sequence is a GENSET polypeptide the invention
                                                                                                                                                              9
                                                                                                                                                                                   9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to human polynucleotides and the polypeptides they encode. The polynucleotides and polypeptides are useful in diagnostics, forensics, gene mapping, medical imaging, identification of mutations
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New isolated polypeptides and polynucleotides, useful for preventing, treating or ameliorating medical conditions, such as cancer, neurodegenerative disorders, lymphoid cell disorders, bone degenerative

responsible for genetic disorders or other traits, assessing biodiversity and producing many other types of data and products dependent on DNA and amino acid sequences. They are also useful for preventing, treating or amelicrating medical conditions, such as cancer, neurodegenerative disorders (e.g. Parkinson's disease, Alzheimer's disease), lymphoid cell disorders, osteoporosis, osteoarthritis, bone degenerative disorders, periodontal disease, liver fibrosis, infections (e.g. viral, fungal or bacterial) or autoimmune diseases (e.g. diabetes, atopic dermatitis). Sequences ABG99888-ABG9988 and ABU00010-ABU00433 represent human polypeptides of the invention. Note: The sequence data for this patent is not represented in the printed specification but is based on sequence information supplied by the European Patent Office
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       GRAAGKAVSCAEIVKRRVPGLHQLTKLRFLQTEDSWVPASPDTGLDPLTVRRHVPAVWVL 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This invention relates to novel isolated human polynucleotides and the encoded proteins thereof. Specifically, it refers to proteases, kinases, phosphetases, secreted and transmembrane proteins, as well as the derived peptide fragments, which can be used to develop antibodies and screen for small molecule agonists and antegonists that can modulate their cantivities. The present invention describes polypeptides, polynucleotides, vectors and host cells useful for diagnosing, preventing and treating proliferative disorders, e.g. cancer, disorders of haematopoiesis such as thrombosis and anaemia, cardiovascular disorders, e.g. ischaemic heart disease and acute myocardial infarction, respiratory diseases, e.g. asthma, pneumonia or cystic fibrosis, disorders of the kidney and utinary tract, e.g. chronic renal failure and glomerulopathy, gastrointestinal disorders, e.g. opptic ulcer or cirrhosis, immune disorders, e.g. HIV infection and systemic luque erythematosus, disorders of the endocrine system, e.g. diabetes mellitus, central nervous system disorders, e.g. epilepsy, Alzheimer's disease or amyotropic lateral cativities including cytostatic, anticasthmatic, they exhibit many various activities including cytostatic, anticasthmatic, anticidiammatory, anticativities anticamenic, cardiant, vasotropic, antiasthmatic, anticidiammatory.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                nephrotropic, antiulcer, hepatotropic, immunosuppressive, antiallergic, dermatological, antirheumatic, antiarthritic, antidiabetic, antibacterial, anticonvulsant, neuroprotective, nootropic, antipsoriatic, antibacterial, fungicide, antiparasitic and virucidal, such that these polynucleotides can be used for gene therapy purposes and the development of appropriate vaccines. This polypeptide is a human protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           61 GRAAGKAVSCAEIVKRRVPGLHQLTKLRFLQTEDSWVPASPDTGLDPLTVRRHVPAVWVL 120

                                                                       This sequence is encoded by an extended human secreted protein coding sequence of the invention. The secreted proteins can be used in treating or controlling a waxiety of human conditions. The secreted proteins may act as cytokines or may affect cellular proliferation or differentiation or may act as immune system regulators, haematopoiesis regulators, tissue growth regulators, regulators of reproductive hormones or cell movement or have chemotactic/chemokinetic, receptor/ligand, anti-inflammatory or tumour inhibition activity. The DNAs can be used in forensic procedures to identify individuals or in diagnostic procedures to identify individuals or in diagnostic procedures to identify the genes corresponding to the extended cDNAs. They are also useful for constructing a high resolution map of the human chromosomes. They can also be used for gene therapy to control or treat genetic diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          61 GRAAGKAVSCAEIVKRRVPGLHQLTKLRFLQTEDSWVPASPDTGLDPLTVRRHVPAVWVL 120

proteins. The invention also relates to an antibody that specifically binds to a polypeptide of the invention and a method of binding the polypeptide to an antibody. The polymuclactides are useful for expressing the entire secreted proteins which they encode and for distinguishing the human tissues and cells, and for distinguishing between human tissues and cells, and for distinguishing between human tissues and cells, that do not express the polymuclactides comprising the cDNAs. The polymuclactides and polypeptides are useful in forensic procedures or disgnostic procedures to identify individuals with genetic diseases resulting from abnormal expression of the genes corresponding to the cDNAs. The sequences are also useful in gene therapy to control or treat genetic diseases. This sequence are represents a human secreted polypeptide of the invention. Note: The sequence data for this patent did not form part of the printed separation but was obtained in electronic format from USPTO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             for

AAX40438 to AAX40715 represent 5' expressed sequence tags (ESTs) for human secreted proteins expressed in prostate, and encode the proteins given in AAX11716 to AAX11993 respectively. The proteins given represent the signal peptide and an N-terminal fragment of a secreted protein. The concleic acid sequences can be used for products for diagnosis and therapy. The proteins dobtained may have cytokine activity, cell cracking because growth regulating activity, haematopoiesis regulating activity, tissue growth regulating activity, haematopoiesis regulating activity, tissue growth regulating activity, anti-inflammatory activity, tumour inhibition activity on ther activity, anti-inflammatory activity, tumour inhibition activity on the activities. The products can be used in forensic, gene therapy and chromosome mapping procedures can be used in forensic, gene therapy and chromosome mapping procedures sequences can also be used for obtaining corresponding promoter sequences can also be used for obtaining corresponding promoter directing extracellular secretion of a polypeptide or the insertion of a polypeptide into a membrane, or importing a polypeptide into a cell
                                                                                                                                                                                                                                                                                 Human; secreted protein, EST; expressed sequence tag; diagnosis; forensic; gene therapy; chromosome mapping; signal peptide; prostate; upstream regulatory sequence; cytokine activity; cell proliferation; differentiation; haematopoiesis regulation; tissue growth regulation; reproductive hormone regulation; chemotactic; chemokinetic; haemostatic; thrombolytic; anti-inflammatory; tumour inhibition.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New isolated prostate-derived nucleic acids - used to develop products which may have cytokine, immune regulatory, haematopoiesis regulating, anti-inflammatory or tumour inhibition activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1 MEHYRKAGSVELPAPSPMPQLPPDTLEMRVRDGSKIRNLLGLALGRLEGGSARHVVFSGS

The invention relates to human nucleic acids (AAIS7798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polymuclectides are useful in gene therapy. A composition containing a polypeptide or polymuclectide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous system diseases, such as localised neuropathies and central nervous system diseases, such as alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, activity, chemoteactic/chemokinetic activity, haemostatic and thrombolytic activity, chemoteactic/chemokinetic activity, haemostatic and thrombolytic activity, arthritis and inflammation, leukaemiss and C.N.S disorders. Note: The sequence data for this patent did not form part of the printed specification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel nucleic acids and polypeptides, useful for treating disorders such as central nervous system injuries.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1 MEHYRKAGSVEL-----PAPSPMPQLPPDTLEMRVRDGSKIRNLLGLALGRLEGG 50

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence is a polypeptide encoded by one of a large number of 5' ESTB derived from mRNAs encoding secreted proteins. The 5' ESTB were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranablated region (UTR) of the mRNA because they are often obtained from oligo-dr primed cDNA libraries. Such ESTB are not well suited for isolating cDNA sequences draw the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTB are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTB are also used in diamonatic from the constant and chromosome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     are also used in diagnostic, forensič, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design expression and secretion vectors
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                9
                                                                                                                                                                                                                                                                                                                                   Human, 5' EST; expressed sequence tag; secreted protein; cDNA isolation; gene therapy; chromosome mapping.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New nucleic acid that is a 5' expressed sequence tag (5' EST) for obtaining cDNAs and genomic DNAs that correspond to 5'ESTs and for diagnostic, forensic, gene therapy and chromosome mapping procedures.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1 MEHYRKAGSVELPAPSPMPQLPPDTLEMRVRDGSKIRNLLGLALGRLEGGSARHVVFSGS

                                                                                                                   The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16175) and the encoded proteins (ABB5737-ABB72072). The sequence data for this patent did not form part of the princed specification, but was obtained in electronic format directly

This invention relates to a novel method for altering one or more plant characteristics. Specifically, it refers to identifying genes that are up or down-regulated in transgenic plants overagressing the heterodimeric strange transcription factor of Arabidopsis and using these sequences to alter plant characteristics accordingly. The present invention describes generating transgenic plants for the production of growth regulators, enzymes, therapeutics, pharmaceuticals and animal feed products, where the altered plant characteristics are selected from increased yield or biomass, enhanced survival capacity, stress tolerance, plant architecture or physiology, altered endoreduplication, biochemistry, signal transduction, storage lipid mobilisation and/or altered bhotosynthesis, each relative to the corresponding wild type plants. Accordingly, these sequences can also be useful as positive or negative selectable markers during transformation of cells or tissues. The identified genes play a role in a variety of biological processes such as DNA replication, cell wall biosynthesis, nitrogen and/ or carbon metabolism or they function as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        transcription factors. This polypeptide sequence is thale cress protein expressed by a gene upregulated 1.3 fold or more in plants overexpressing the E2Fa/DPa transcription factor, given in an exemplification of the

This invention relates to a novel method for altering one or more plant characteristics. Specifically, it refers to identifying genes that are up characteristics. Specifically, it refers to identifying genes that are up care of whom-regulated in transgenic plants overexpresshing the heterodimeric EZFA/DPa transcription factor of Arabidopsis and using these sequences to alter plant characteristics accordingly. The present invention describes generating transgenic plants for the production of growth regulators, carly managenic plants for the production of growth regulators, carly manages, therapeutics, pharmaceuticals and animal feed products, where the altered plant characteristics are selected from increased yield or biomass, enhanced survival capacity, stress tolerance, plant architecture or physiology, altered endoreduplication, biochemistry, signal transduction, storage lipid mobilisation and/or altered photosynthesis, each relative to the corresponding wild type plants. Accordingly, these cach relative to the corresponding wild type plants. Accordingly, these deduction that the stands of the calls or tissues. The identified genes play a role in a variety of biological processes such as DNA replication, cell and playeptide sequence is thale cress protein expressed by a gene upregulated 1.3 fold or more in plants overexpressing the EZPA/DPa transcription factor, given in an exemplification of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This invention relates to novel isolated human polynucleotides and the encoded proteins thereof. Specifically, it refers to proteases, kinases, phosphatases, secreted and transmembrane proteins, as well as the derived peptide fragments, which can be used to develop antibodies and screen for small molecule agonists and antagonists that can modulate their cativities. The present invention describes polypeptides, preventing and treating proliferative disorders, e.g. cancer, disorders of and treating proliferative disorders, e.g. cancer, disorders of and treating proliferative disorders, e.g. cancer, disorders of e.g. ischaemic heart disease and acute myocardial infarction, respiratory diseases, e.g. asthma, pneumonia or cystic fibrosis, disorders of the kidney and urinary tract, e.g. chronic renal failure and glomerulopathy, c.g. ischaemic plainter, e.g. chronic renal failure and glomerulopathy, c.g. intary tract, e.g. opptic ulcer or cirrhosis, immune disorders, e.g. HUY infection and systemic lupus erythematosus, disorders of the endocrine system, e.g. diabetes mellitus, central nervous system confisorders, e.g. epilepsy, Alzheimer's disease or amyotropic lateral confisorders, e.g. peptic ulcer or cirrhosis, immune confisorsis, skin disorders, e.g. psoriasis, as well as bacterial, fungal, sclerosis, skin disorders, e.g. psoriasis, as well as bacterial, fungal, continnesmic, antilanaemic, antilanaemic, antilanaemic, antilanaemic, antilanaemic, antilanaemic, antilanaemic, cardiant, vasotropic, antisathmatic, antilanaemic, antilanaemic, antilanaemic, antilanaemic, antisathmatic, antilanaemic, antiparasitic and virucidal, such that these polymucleotides anticonvulsant, neuroprotective, nootropic, antipasedic, antilanaemic can be used for gene therapy purpose and the development of appropriate curvance.

Continged of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    169 Ardeadcacraccedaaadcredcretratadacreccaccecrreccaarecceae

potentially secreted proteins. The nucleic acids and the polypeptides they encode may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate GENSET gene expression. For example, they be used to treat disorders associated with decreased GENSET gene expression by rectifying mutations or deletions in a patient's gene expression by rectifying mutations or deletions in a patient's patients own production of GENSET polypeptides. Conversely, antisense nucleic acid molecules may be administered to down regulate GENSET expression by binding with the cells' own genes and preventing their expression. The sense and antisense nucleic acids may also be used as DNA probes in diagnostic assays to detect and quantitate the presence of similar nucleic acid sequences in samples, and hence to determine which

                                                                                                                                                                                                                                                                                                                                                                                                                                                                             셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This invention relates to novel isolated human polynucleotides and the encoded proteins thereof. Specifically, it refers to proteases, kinases, phosphatases, secreted and transmembrane proteins, as well as the derived composition of the present invention be used to develop antibodies and screen for small molecule agonists and antagonists that can modulate their continuities. The present invention describes polypeptides, preventing and treating proliferative disorders, e.g. cancer, disorders of and treating proliferative disorders, e.g. cancer, disorders of namatopoiesis such as thrombosis and anaemia, cardiovascular disorders, e.g. ischaemic heart disease and acute myocardial infarction, respiratory diseases, e.g. asthma, pneumonia or cystic fibrosis, disorders of kidney and urinary tract, e.g. chronic renal failure and glomerulopathy, gastrointestinal disorders, e.g. opeptic ulcer or cirrhosis, immune disorders, e.g. HIV infection and systemic lupus erythematosus, disorders of the endocrine system, e.g. diabetes mellitus, central nervous system disorders, e.g. peptic disease or amycoropic lateral collectors, skin disorders, e.g. paptic sissasses or amycoropic lateral collectors, skin disorders, e.g. paptic and viral diseases. Accordingly, they exhibit many various collection cardianance antial infammatory.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           antianaemic, cardiant, vasotropic, antiasthmatic, antinflammatory, nephrotropic, antiulcer, hepatotropic, immunosuppressive, antiallergic, dematological, antirheumatic, antiarthritic, antidabbetic, anticonvulsant, neuroprotective, nootropic, antipsoriatic, antibacterial, fungicide, antiparastic and vincidal, such that these polynucleotides can be used for gene therapy purposes and the development of appropriate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               120

The invention relates to human polynucleotides and the polypeptides they encode. The polynucleotides and polypeptides are useful in diagnostics, forensics, gene mapping, medical imaging, identification of mutations responsible for genetic disorders or other traits, assessing biodiversity and producing many other types of data and products dependent on DNA and amino acid sequences. They are also useful for preventing, treating or ameliorating medical conditions, such as cancer, neurodegenerative disorders, osteoporosis, osteoarthitis, bone degenerative disorders, periodontal disease, liver fibrosis, infections (e.g. viral, fungal or bacterial) or autoimmune diseases (e.g. diabetes, atopic dermatitis). Sequences ARX04986-ARX05511 represent human polymoids of the invention. Note: The sequence data for this patent is not represented in the printed specification but is based on sequence information supplied
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         480
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               334

The invention relates to human cDNA sequences that encode human secreted protesins. The invention also relates to an antibody that specifically binds to a polypeptide of the invention and a method of binding the polypeptide to an antibody. The polymucleotides are useful for expressing the entire secreted proteins which they encode and for distinguishing
                                                                                                                         308

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This sequence represents an extended human secreted protein coding sequence of the invention. The secreted proteins can be used in treating or controlling a variety of human conditions. The secreted proteins may act as cytokines or may affect cellular proliferation or differentiation or may act as immune system regulators, haematopoiesis regulators, tissue growth regulators, regulators of reproductive hormones or cell movement or have chemotactic/chemokinetic, receptor/ligand, anti-inflammatory or tumour inhibition activity. The DNAs can be used in forensic procedures to identify individuals or in diagnostic procedures to identify individuals or in diagnostic procedures to identify the genes corresponding to the extended conNas. They are also useful for constructing a high resolution map of the human chromosomes. They can also be used for gene therapy to control or treat genetic diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    128

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          420
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              488
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   human tissues and cells from non-human tissues and cells, and for distinguishing between human tissues and cells that do or do not express the polymucleotides comprising the cDNAs. The polymucleotides and polypeptides are useful in forensic procedures or disagnostic procedures to identify individuals with genetic diseases resulting from abnormal expression of the genes corresponding to the cDNAs. The sequences are also useful in gene therapy to control or treat genetic diseases. This sequence represents a human secreted polynucleotide of the invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format from USPTO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               GGCCTGGGTTCCATGCCCAGCTGTGGCCCTCGTTCCCGAAGAAGGCTCGAGAC 480

Polymucleotide sequences AAC95521 - AAC95570 represent cDNA encoding 50 human secreted proteins AAB52012 - AAB52161. Sequences AAB52062 - CC human secreted proteins AAB52012 - AAB52161. Sequences AAB52062 - CC AAB52103 represent alternative polypeptides encoded by the genes, and camino acid sequences with which they share homology. The genes and proteins have activities dependent on the tissues and cells in which they care expressed. Examples of their activities include cytostatic; immunosuppressive; nootropic, antidiametory; antidiac antiallergic; cimmunosuppressive; nootropic, antifilammatory; antidicer; vulnerary; cc anticonvulsant; antibacterial; antifilammatory; antidicer; vulnerary; cc anticonvulsant; antibacterial; antifilammatory; antiparasitic; and cardiant. The secreted proteins polypeptides, antagonists and agonists may be useful in treating, preventing and ovarian cancer, and other cancers of the adrenal gland, bone, bone marrow, breast, gatcrointestinal tract, cliver, lung, or urogenital. Immune disorders such as Addison's disease, multiple softens, rheumatoid arbritis and ulcerative colitis; cardiovascular disorders such as carbitis and ulcerative colitis; acadiovascular disorders such as createrial, fungal and parasitic infections diseases such as viral, bacterial, fungal and parasitic infections may also be treated using the proteins and polymucleotides of the invention. Sequences AAC95512 - CC AAC95520 and AAB52011 are used in the isolation and characterisation of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                       Fifty nucleic acid molecules encoding human secreted proteins, useful in the prevention, treatment and diagnosis of cancer, immune disorders, cardiovascular disorders and neurological diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 1036 BP; 368 A; 238 C; 235 G; 192 T; 0 U; 3 Other;

The DNA and protein sequences of the invention are useful in the treatment of cardiovascular disorders, such as: arrhythmia, atherosclerosis, stroke, endocarditis, congestive heart failure, rheumatic heart disease, cardiomyopathy, haemorrhoids, varicose veins, migraine, or thrombosis. The DNA and protein sequences may also be used for treating or preventing: neural disorders, immune system disorders, pulmonary disorders, reproductive disorders, gastrointestinal disorders, pulmonary disorders, renal disorders, pulmonary disorders, the present CDNA sequence encodes a human secreted cancerous diseases. The present CDNA sequence encodes a human secreted protein of the invention. NOTE: The present sequence is shown on the WIPO

The invention comprises the amino acid and coding sequences of human secreted proteins. The DNA and protein sequences of the invention are useful for detecting, preventing, diagnosting, prognosticating, treating or ameliorating; haematopoietic or haematological disorders (e.g. anaemia and haemophilia); inflammatory disorders (e.g. inflammatory bowel disease wound healing and disorders of epithelial call proliferation; immune disorders of epithelial call proliferation; immune disorders (e.g. autoimmune disorders and asthmatic disorders); ardiovascular disorders (e.g. atherosclerosis and myocarditis); and gastrointestinal disorders (e.g. duodenal ulcers and gastrointestinal disorders (e.g. duodenal ulcers and gastroenteritis). The present DNA sequence encodes a human secreted protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CTGCACCAGCTTACCAAGCTGCGCTTCCTGCAGACCGAGGACAGCTGGGTGCCAGTCTCA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                a
                                                                                                                                                                    The invention relates to novel genes and their fragments which are useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids and proteins are useful in the diagnosis, treatment and prevention of conditions are lated to diabetes, e.g. hyperglycaemia, obesity, retinopathy, polyneuropathy, atherosclerosis, anaemia, stroke, gangrene, impotence, infection, cataract, renal disorders, or endocrine disorders. The present sequence was used to illustrate the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                            ij

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to an isolated polypeptide chosen from 123 human secreted proteins, such as, H6EDM64, HBHAA05, HBJCR46, HBJCR16, HUMAN51, HCGMP72, HDPQ30, HBZCM39, HBZPA10, HGBHP91 and HLDQU79. The HCMSX51, HCGMP72, HDPQ30, HBZCM39, HBZPA10, HGBHP91 and HLDQU79. The Polypeptides are useful for the preparation of a diagnostic or pheroentical composition for diagnosing or and are useful for treating or preventing diseases or conditions, such as neural, immune system, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, renal, proliferative disorders and cancerous diseases and conditions. The polypeptides have immune activity, chemotactic activity, and binding polypeptides have immune activity, chemotactic activity, and binding neuronal disorders or neuro-degenerative conditions such as Alzhaimer's disease, Parkinson's disease, and acquired immunodeficiency syndrome classes, and to prevent skin aging due to sunburn by stimulating keratinocyte growth. The molecules are also useful to modulate mammalian characteristics including .The encoding sequences are

The invention relates to an isolated polynuclectide comprising any one of 38043 cDNA sequences, appearing as ACH12789-ACH5081, whose sequence was determined by the technique of SBH dequencing by Pybridisation). Also included is a purified polypeptide comprising a sequence corresponding to a reading frame of the novel polynucleotide. The nucleic acid sequences are useful in diagnostics as expressed sequence tags (EST) for information of the novel polynucleotide. The nucleic acid sequences in forensics, in assessing biodiversities, or in identifying mutations in forensics, in assessing biodiversities, or in identifying mutations in forensics, in generating antisense DNA or RNA. The prefection of correction of the useful for generating antisense DNA or RNA. The prefect is one of the 38043 isolated cDNA/EST sequences. Note: The sequence data of for this patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO at sequence than 1700-110-20030073623

```
The invention relates to a combination comprising cDNAs that are differentially expressed in colon disorder. The methods and compositions of the present invention are useful for disgnosing, treating, staging or monitoring treatment for colon cancer. They are also useful in high throughput methods for using cDNAs to detect differential expression of nucleic acids in a sample, screening molecules or compounds to identify a ligand which specifically binds a cDNA, and using a protein to screen molecules or compounds to identify at least one ligand which specifically
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CCTGGGTTCCATGCCCAGCTCCAGCTGTGGCCCTCGTTCCCGAAGAAGAGGCCTCGAGACAC 482

This invention relates to novel isolated cDNAs that are differentially expressed in MYCN activated cells. Specifically, it refers to polynucleotide sequences that exhibit differential expression patterns in cells activated by the transactivator MYCN, where MYCN is a protononcogene that is amplified in neuroblastoma cells and is common in small cell lung cancers. The present invention describes these cDNA molecules as useful for in hybridisation assays to detect expression of nucleic acids (or complementary nucleic acids) in a present in a given sample, well as for screening assays by identifying molecules or compounds that specifically bind the cDNA as a ligand and modulate function or activity. Accordingly, these compositions exhibit cytostatic activity and can also be used for gene therapy purposes. This polynucleotide sequence is a cDNA that is differentially expressed in MYCN activated cells, given in an the printed specification but has been obtained in electronic format from the US Patent Office at

An ORF has been identified within the sequence. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from

mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design expression and secretion vectors
                                                                                                                                                                                                                                                                                                                 68 ATGGAGCACTACCGGAAAGCTGGCTCTGTAGAGCTCCCAGCGCCTTCCCCAATGCCCCAG 127

Direct Submission

AL Charlest Submission

Submitted (27-APR-2001) Sanger Centre, Hinxton, Cambridgeshire,
CB10 18A, UK. Email anquirtes: humquery@sanger.ac.uk Clone
requests: clonerequesc@sanger.ac.uk

On Mar 24, 2001 this sequence version replaced gi:13274314.

During sequence assembly data is comparated as variations

Uning sequence asce found these are annotated as variations
together with a note of the overlapping clone name. Note that the
variation annotation may not be found in the sequence submission

corresponding to the overlapping clone, as we submit sequences with
only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all
regions were either double-stranded or sequenced with an alternate
chemistry or covered by high quality data (i.e., phred quality >=
30); an attempt was made to resolve all sequencing problems, such
as compressions and repeats; all regions were covered by at least
one plasmid subclone or more than one M13 subclone; and the
assembly was confirmed by restriction digest. The following
abbreviations are used to associate primary accession numbers given
in the feature table with their source databases: Em; EMBL; Sw;
SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP

Submitted (13-MAY-2003) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

On May 13, 2003 this sequence version replaced gi:24819301.

The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/ratl/): Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome table.

                                                     Submitted (12-0CT-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

Baylor Plaza, Houston, TX 77030, USA
On Oct 12, 2002 this sequence version replaced gi:21739791.

The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.two.edu/projects/art/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome table.
                                                                                                                                                                                                                                                                                                                                                                                                     NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
NOTE: This is a "working draft' sequence. It currently consists of 1 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submittor.
